

Brainstorming & Idea Prioritization Template

Date	26/06/2026
Team ID	Not Assigned
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Gowthamsai Setti	Build an ML model to predict flood risk using historical rainfall data	Machine Learning	1
2	Rishitha Padaga	Develop a Flask web application for real-time flood risk prediction	Web Development	2
3	Sai Siddardha Bevara	Use XGBoost for highest accuracy in flood classification	Model Selection	1
4	Karri Dhinesh	Perform EDA and visualize rainfall patterns using Matplotlib and Seaborn	Data Analysis	3
5	Ravi Kumar Yadla	Deploy the application on cloud platform for public access	Deployment	2
6	Gowthamsai Setti	Compare Decision Tree, Random Forest, KNN and XGBoost for best performance	Model Evaluation	1

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Build and compare ML models (Decision Tree, Random Forest, KNN, XGBoost) for flood prediction using historical rainfall data	High	High	1	Yes
2	Develop and deploy a Flask web application for real-time flood risk prediction accessible via browser	High	High	2	Yes
3	Perform Exploratory Data Analysis (EDA) and visualize rainfall patterns and feature correlations	High	Medium	3	Yes
