

Project Initialization and Planning Phase

Date	26/06/2026
Team ID	Not Assigned
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A meteorologist monitoring a flood-prone district.	Predict flood risk accurately before it occurs.	Traditional methods are too slow and unreliable.	There is no real-time intelligent prediction system available.	Anxious and underprepared to issue early warnings.
PS-2	A disaster relief coordinator managing monsoon season.	Allocate rescue resources to the most at-risk regions.	I cannot assess multiple regions quickly enough.	Manual analysis of weather data takes too long.	Overwhelmed and unable to prioritise effectively.
PS-3	A government analyst responsible for disaster preparedness.	Validate flood prediction accuracy using historical data.	Existing models lack transparency and measurable accuracy.	There is no standardised ML-based evaluation system.	Uncertain about the reliability of current tools.
PS-4	A local community member living in a flood-prone area.	Receive early flood warnings to protect my family.	Alerts are often issued too late or not at all.	No accessible early-warning system exists in my region.	Fearful and vulnerable during every monsoon season.
PS-5	A flood risk researcher studying rainfall patterns in India.	Analyse historical rainfall data to identify flood triggers.	Raw meteorological data is complex and hard to interpret.	There are no automated tools for pattern analysis.	Frustrated by the lack of data-driven research tools.
